

Agent Checkout

Agent-native Shopify commerce on Somnia - enabling AI agents to discover, pay for, and complete real-world purchases in under 2 minutes of merchant setup.

THE OPPORTUNITY

Commerce is shifting from human browsers to autonomous AI agents. By 2030, analysts project a multi-trillion-dollar agent economy (WEF: ~\$30T). Today, 12,000+ MCP servers expose tools to agents, and protocols like HTTP 402 (x402) are processing millions of machine-to-machine payments. Yet 4.8M+ Shopify merchants have no standard way to accept agent orders. Agent Checkout bridges the world's largest SMB ecommerce platform to the emerging agent commerce stack.

WHAT WE ARE BUILDING

A plug-and-play layer that makes any Shopify store agent-ready: merchants register in ~2 minutes; AI agents discover products via Model Context Protocol (MCP), checkout via HTTP 402 Payment Required, settle in native STT on Somnia, and receive confirmed Shopify orders - with Somnia Agents providing consensus-validated pricing, address validation, and natural-language search.

UNIQUE SELLING POINT

First unified stack combining (1) Shopify merchant onboarding, (2) MCP agent discovery, (3) HTTP 402 micropayments, and (4) Somnia Agents for oracle + validation - on a hyper-performant EVM L1 built for agentic applications. Competitors address fragments (payment rails OR commerce OR agents); we ship the full loop from 'find product' to 'paid Shopify order' in one repo.

WHY IT MATTERS

Merchants unlock a new distribution channel (AI agents as customers) without replatforming. Agents gain a standardized, verifiable checkout rail instead of brittle web scraping. Somnia gains a flagship real-world commerce use case demonstrating native STT settlement, Somnia Agents, and sub-cent fees at scale.

TRACTION & STATUS

Working prototype: Next.js merchant UI, dual MCP servers (shopping + payment), two-phase HTTP 402 checkout, on-chain STT verification on Shannon Testnet (chain 50312), Supabase persistence, Shopify Admin order sync. Built for Encode Agentathon; open-source and deployment-ready.

THE ASK / NEXT STEPS

Hackathon completion + mainnet pilot with Somnia ecosystem partners. Roadmap: production Somnia Agents integration, multi-store agent marketplace, UCP/AP2 compatibility layer, and merchant analytics for agent-driven revenue.
